Commentaires:	Comments:
La phase descendante de la courbe épidémique du Nigeria se confirme. Le Niger vient d'aborder également à la semaine 16 le décrochage de sa courbe qui devrait se poursuivre les semaines à venir. Rappelons que le Tchad, la RD Congo le Burkina Faso et la Centrafrique ont également enregistrés des districts en épidémie cette année.	The downward trend of the epidemic curve in Nigeria is maintained. Niger's epidemic curve also started to descend and will likely continue this descending trend during the coming weeks. Note that Chad, DR Congo, Burkina Faso and Central Africa have also reported epidemic districts this year.

Commentaires:	Comments:
Les germes prédominants au niveau des résultats positifs de laboratoire à nos jours restent largement le <i>Neisseria meningitidis</i> A suivi du <i>Streptococcus pneumoniae</i> . Cependant des cas de <i>Neisseria meningitidis</i> W135 restent présents surtout au Tchad et au Nigeria. Une surveillance biologique de ces souches dans ces pays s'impose pour déterminer à temps tout risque épidémique du à ces germes comme cela a été le cas au Burkina Faso avec la première épidémie de méningite à <i>NmW135</i> en Afrique en 2002.	The prevailing germs among positive CSF laboratory results is largely <i>Neisseria meningitidis</i> A followed by <i>Streptococcus pneumoniae</i> . However cases of <i>Neisseria meningitidis</i> W135 have been isolated in Chad and Nigeria. These countries should set up a biological surveillance system of these strains in order to detect on time any epidemic risk due to <i>NmW135</i> , as it was the case in Burkina Faso with the first large scale of <i>NmW135</i> epidemic in Africa in 2002.
